

Business Analysis Performed Using SQL

#	Analysis	Description
1	Order & Customer Mapping	Linked customer and order data using SQL joins to establish customer-order relationships.
2	Total Sales Analysis	Calculated the total revenue generated from all orders.
3	Total Profit Analysis	Evaluated the overall profit earned by the business.
4	Customer Revenue Analysis	Computed the total revenue contributed by each customer.
5	Top Customer Identification	Identified the customer with the highest total sales.
6	Category-wise Sales Analysis	Compared sales performance across different product categories.
7	Category-wise Profit Analysis	Analysed profit generated by each product category.
8	Customer Performance Analysis	Assessed customer spending patterns and revenue contribution.
9	Product Performance Analysis	Ranked products based on total sales generated.
10	Order Volume Analysis	Determined the total number of orders processed.
11	Average Order Value (AOV)	Calculated the average revenue generated per order.
12	High-Value Customer Analysis	Identified customers whose total purchases exceeded a predefined threshold.
13	Most Profitable Product Analysis	Determined the product generating the highest overall profit.
14	Customer Purchase Frequency Analysis	Measured how frequently customers placed orders and identified repeat buyers.

Key SQL Analyses Performed

- **Order & Customer Mapping** – Linked customer and order data using SQL joins.
- **Total Sales & Profit Analysis** – Calculated overall business revenue and profitability.
- **Customer Revenue Analysis** – Measured each customer's contribution to total sales.
- **Top Customer Identification** – Identified the highest revenue-generating customer.

- **Category-wise Sales & Profit Analysis** – Compared revenue and profit across product categories.
- **Customer Performance Analysis** – Evaluated customer spending behaviour.
- **Product Performance Analysis** – Ranked products based on sales.
- **Order Volume Analysis** – Counted the total number of orders processed.
- **Average Order Value (AOV)** – Calculated average revenue per order.
- **High-Value Customer Analysis** – Identified customers exceeding a sales threshold.
- **Most Profitable Product Analysis** – Found the product with the highest profit.
- **Customer Purchase Frequency Analysis** – Analysed repeat purchasing behaviour.
